

Outbreak Management Plan

Scenario: Learner or staff member starts to display symptoms whilst at College

The most important symptoms of COVID-19 are recent onset of any of the following:

- a new continuous cough
- a high temperature
- a loss of, or change in, your normal sense of taste or smell (anosmia)

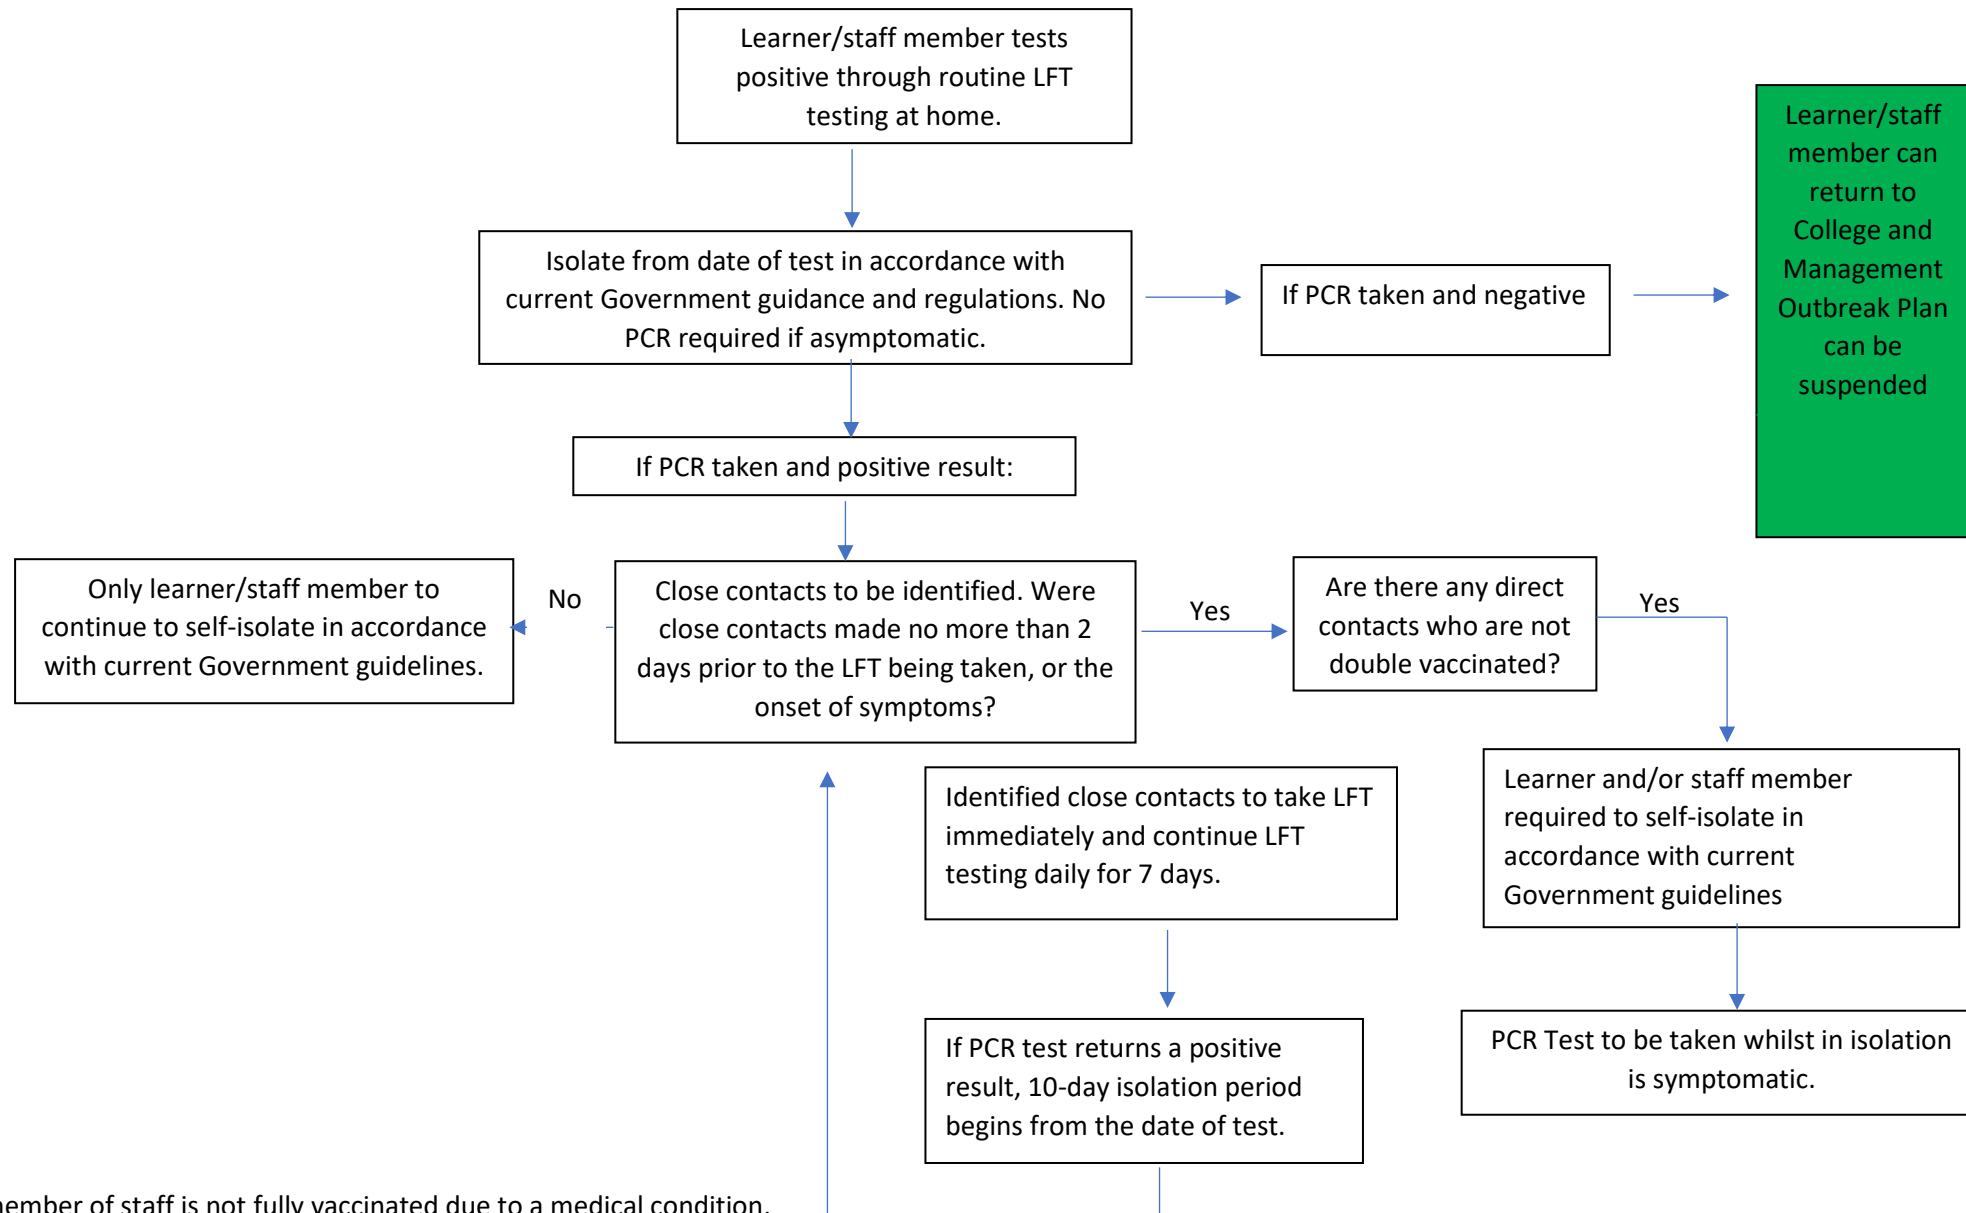

If there are 5 positive cases within the College community at any one time, this is considered an outbreak and Public Health will be informed. This may mean we need to reintroduce the 'bubble' system, for a temporary period, to ensure as much continuity for as many learners as possible,

* if a learner/staff member is not double vaccinated due to a medical condition a certificate will be required to show they are exempt from isolation.

Outbreak Management Plan

Scenario: Learner or staff member tests positive through routine Lateral Flow Testing (LFT) Device at home

*if a learner or member of staff is not fully vaccinated due to a medical condition, a certificate will be required to show they are exempt from isolation.
